9.2.2	<p>IP6X test:</p> <p>Dust-proof luminaires (first characteristic Inumeral 6) shall be tested in a dust chamber similar to that shown in Figure 6, in which talcum powder is maintained in sus-Pension by an air current. The chamber shall contain 2 kg of powder for every cubic metre of its volume. The talcum powder used shall be able to pass through a square-meshed sieve whose nominal wire diameter is 50 µm and whose nominal free distance between wires is 75 µm. It shall not have been used for more than 20 tests.</p> <p>The test shall proceed as follows:</p> <p>a.The luminaire is suspended outside the dust chamber and operated at rated supply voltage until operating temperature is achieved.</p> <p>b.The luminaire, whilst still operating, is placed with the minimum disturbance in the dust chamber.</p> <p>c.The door of the dust chamber is closed.</p> <p>d. The fan/blower causing the talcum powder to be in suspension is switched on.</p> <p>e.
